## 2. RFXtrx general information

The RFXtrx transceivers and RFXrec receivers are communicating over an USB port with the Home Automation application. The RFXtrx/rec is powered by the USB port.

At startup the RFXtrx enters for 2 seconds the boot loader (red LED is on) and after this it starts the receive/transmit firmware. If valid (decode-able) packets are received the yellow LED will blink.

The RFXtrx315 and the RFXrec433 are mainly for use in the US. The RFXtrx315 can receive US X10 lighting and security sensors **or** US Visonic PowerCode sensors at 315MHz.

The RFXrec433 can receive weather sensors of different brands at 433.92MHz.

The RFXtrx433 is a transceiver (transmitter+receiver) and can receive and control a large number of sensors and other devices.

The RFXtrx433E is an extended RFXtrx433 transceiver with additional memory and non-volatile memory for Somfy RTS codes and configuration settings.

The RFXtrx433XL is the next generation version with double size memory and a serial connection for the Dutch and French smart meters.

The RFX433 is an RFXtrx433XL with another transceiver module and another USB chip.

## **2.4.    *undec on***

### **This parameter is for internal use by RFXCOM only!!!**

If new sensor types are released, they will most probably not be decoded by the RFXtrx firmware. For this reason, we have added the option to enable receive of undecoded messages. This function is only to enable RFXCOM to add this new sensor type in the firmware if possible. If “undec on” is enabled in normal use the application will receive a lot of undecoded messages mostly as a result of RF noise or disturbed RF packets.

**Important:** For normal use “undec on” should be disabled

## 2.5. Sensitivity influenced by enabled protocols

All protocols can be enabled in the **Pro firmware** versions; however, it is still preferred to enable only the protocols used for receive.

The sensitivity of the receiver part is highly influenced by the number of protocols enabled in Type1, Type2, Ext or Ext2 firmware. Lesser protocols enabled will make the receiver more sensitive for the enabled protocols.

There are a few protocols that will reduce or even eliminate receiving of other protocols if enabled in Type1, Type2, Ext or Ext2 firmware.

For example:

If the AD (LightwaveRF, Siemens) protocol is enabled it can stop receiving of Meiantech / Atlantic, Oregon 3.0, Visonic and Mertik.

All other protocols are disabled if BlindsT0 is enabled in Type1, Type2, Ext, Ext2 or RFX433 firmware.

## 2.6. RF range reduction

The RF signals operating distance is reduced when the signal has to pass through walls.

## 2.7. Home Automation software

For the list of Home Automation software that supports the RFXtrx see the web site

[www.rfxcom.com](http://www.rfxcom.com)

## 2.8. Dimensions

The dimensions of the enclosure: 83.5 x 42 x 15 mm

Total height from bottom to antenna top is 122mm

## 2.9. Electrical

The RFXtrx is powered by the 5 Volt of the USB interface.

Operating current;

Receive mode: 28 mA (0.14Watt)

Transmit mode: 45 mA

The RFXtrx Radiated RF power is 10dBm max.

## 2.10. Environmental conditions

Normal operating: 15°C to 35°C

Absolute min-max temperature: -10°C to 55°C

### 3. Install the USB driver

The RFXtrx has the FTDI FT232R USB interface chip installed.

The RFXtrx433XL has the FTDI FT230XQ USB interface chip installed.

The USB drivers are available at <http://www.ftdichip.com/Drivers/VCP.htm>

The RFXtrxUSB and RFXtrxWifi with RFX433 and RFX868 have the CP2102N USB interface chip installed.

The USB drivers are available at [silabs](http://silabs.com)

### 4. Run RFXflash on Linux under Mono

Open a Terminal screen in Linux (Ctrl-Alt-T)

Execute once:

*Install Mono:*

**[sudo] apt-get install mono-runtime**

*Install VisualBasic support under Mono:*

**[sudo] apt-get install libmono-microsoft-visualbasic8.0-cil**

If the USB device is created as ttyACMx you will need to create a link between /dev/ttyACMx and a serial port /dev/ttySx.

This is not necessary if the device is created as /dev/ttyUSBx !!

**[sudo] ln -sf /dev/ttyACM1 /dev/ttyS3**

Note: sudo must be entered without brackets [ ]. sudo is required if not running as super user.

*Launch the RFXflash.exe program.*

**[sudo] mono RFXflash.exe**

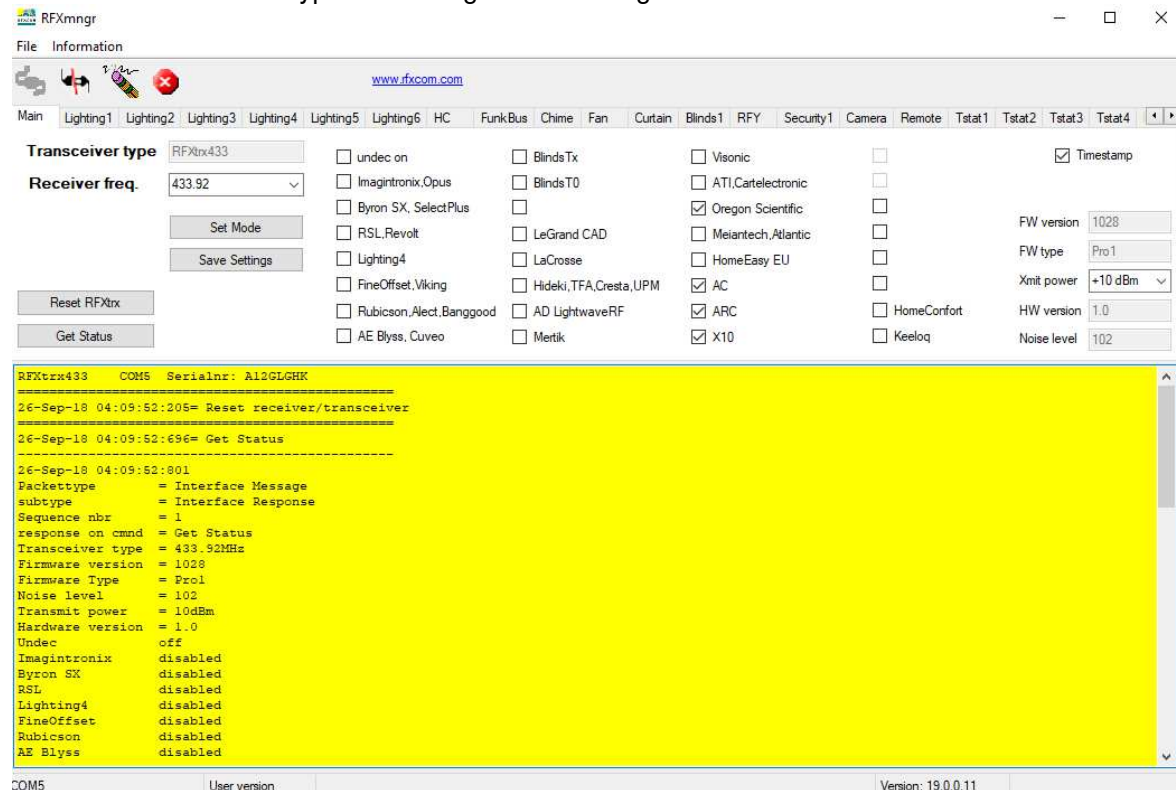

Note: RFXmngr does not operate under mono!

## 5. RFXmngnr test program

The RFXmngnr Windows program supports decoding of received data and allows you to transmit commands.

RFXmngnr can only be used with Windows!

After the connection the RFXmngnr program transmits a Reset and Get Status command so that it will know the RFXtrx type and configuration settings:

Transmitter protocols are always enabled but receiver protocols can be disabled. This is very useful because the receiver will become more sensitive when protocols not used are disabled. Select only the protocols to be used for receive, click **Set mode** and click **Save Settings**.

Note that these settings are lost in Type1 and Type2 firmware after a firmware update and need to be set again.

## 5.1. Receiver

The RF protocols to be received can be configured on the Main tab at **Set Mode**.

Click **Save Settings** to save the selected protocols in non-volatile memory of the RFXtrx. This configuration is now restored every time after a power up.

Note that these settings are lost after a firmware update in Type1 or Type2 firmware and need to be set again.

**Note:** Protocol enabling is only necessary for receive. Transmit protocols are always enabled.

The received RF data is decoded and displayed in the yellow window.

The screenshot shows the RFXmngnr software interface. At the top, there's a menu bar with 'File' and 'Information'. Below it is a toolbar with icons for a hand, a lightbulb, a pencil, and a red 'X'. The 'Main' tab is selected, showing various configuration options. On the left, there are buttons for 'Reset RFXtrx' and 'Get Status'. In the center, there are input fields for 'Transceiver type' (set to 'RFXtrx433') and 'Receiver freq.' (set to '433.92'). Below these are 'Set Mode' and 'Save Settings' buttons. On the right, there are several checkboxes for enabling protocols: 'und', 'Imag', 'Byrc', 'RSL', 'Ligh', 'Fine', 'Rub', and 'AE I'. At the bottom, a yellow window displays a log of events: 'RFXtrx433 COM5 Serialnr: A12GLGHK', '26-Sep-18 04:09:52:205= Reset receiver/transce', '26-Sep-18 04:09:52:696= Get Status', and a detailed status report for '26-Sep-18 04:09:52:801' showing packet type, subtype, sequence number, command, transceiver type, firmware version, and type.

## 5.2. Transmitter

The tabs after the Main tab are used to send commands to the transmitter.  
For example, Lighting1 is used to send X10, ARC and some more.

**Note:** Protocol enabling is only necessary for receive. Transmit protocols are always enabled.

Select Type to see which protocols are supported on the different tabs.

The transmitted commands are displayed in the yellow window including the acknowledge send by the RFXtrx, in the example above "ACK, data correct transmitted".

## 6. Flash update of the RFXtrx

### 6.1. *Update firmware in the RFXtrx*

Firmware is flashed in the RFXtrx using this procedure:

1. Depending on the RFXtrx type download the latest .hex firmware file.
2. Connect the RFXtrx to a Windows system or Linux under MONO
3. Stop any program that is connected to the RFXtrx.
4. Start the RFXflash program with administrator rights (version 10.0.0.0 or higher)
5. Select the USB RFXtrx COM port or TCP/IP port and click the CONNECT button, (the red LED on the RFXtrx should switch on now)
6. Load the correct .hex firmware file for your RFXtrx,
7. Click the WRITE button,
8. Click the Normal Execution mode button.

#### **IMPORTANT:**

1. Do not interrupt the flash procedure when started.
2. It can happen that the flash procedure ends with a pop-up screen indicating errors. Just disconnect the RFXtrx and start again at step 5 until the flash procedure is finished without errors.

If the red LED does not switch on if you click the CONNECT button:

1. Check if you have selected the correct USB COM port.
2. If you have flashed the RFXtrx before and interrupted the flash procedure it is possible that the RFXtrx does not enter the flash state. Contact [support@rfxcom.com](mailto:support@rfxcom.com) for help.

**Note:** Receiver Settings are lost in Type1 and Type2 firmware after a firmware update and must be set again.

## 6.2. Update firmware in the RFXtrx step by step

- Click the Connect to Device button.

The RFXtrx will automatically switch from normal mode to the bootloader now.

- Click the Open HEX file button and load the RFXtrx`yyy??_zz`.hex file  
Be sure to load the latest firmware file for the RFXtrx.  
`yyy` indicates the RFXtrx frequency, so load the RFXtrx433 for an RFXtrx433!  
`??` this is XL for the RFXtrxXL versions.  
`zz` indicates the firmware version.

- Click the Write device button and the RFXtrx is flashed.

- Click on the Normal Execution Mode button to set the RFXtrx to running mode.

**Note:** Receiver Settings are lost in Type1 and Type2 firmware after a firmware update and must be set again.

## 7. RFXtrxWifi

### 7.1. *Restore Wifi settings*

To reset the Wifi settings press the RESTORE button inside the RFXtrxWifi and configure the RFXtrxWifi.

### 7.2. *Configure the RFXtrxWifi.*

Connect the RFXtrxWifi to an USB or the external 5V 1A power supply.

Open the Wifi network settings on your PC or mobile and connect the access point RFXCOM WiFi Manager and use password: 12345678

Open a browser and open 192.168.4.1 and enter your Wifi credentials, SSID and password of your Wifi network.

Optional enter a Local IP with Subnet Mask and Gateway, for example:

192.168.1.150

255.255.255.255.0

192.168.1.1

DHCP is used if no Local IP info is entered

### **Enter your WiFi credentials**

*for DHCP do not enter any value at Local IP, Subnet Mask and Gateway*

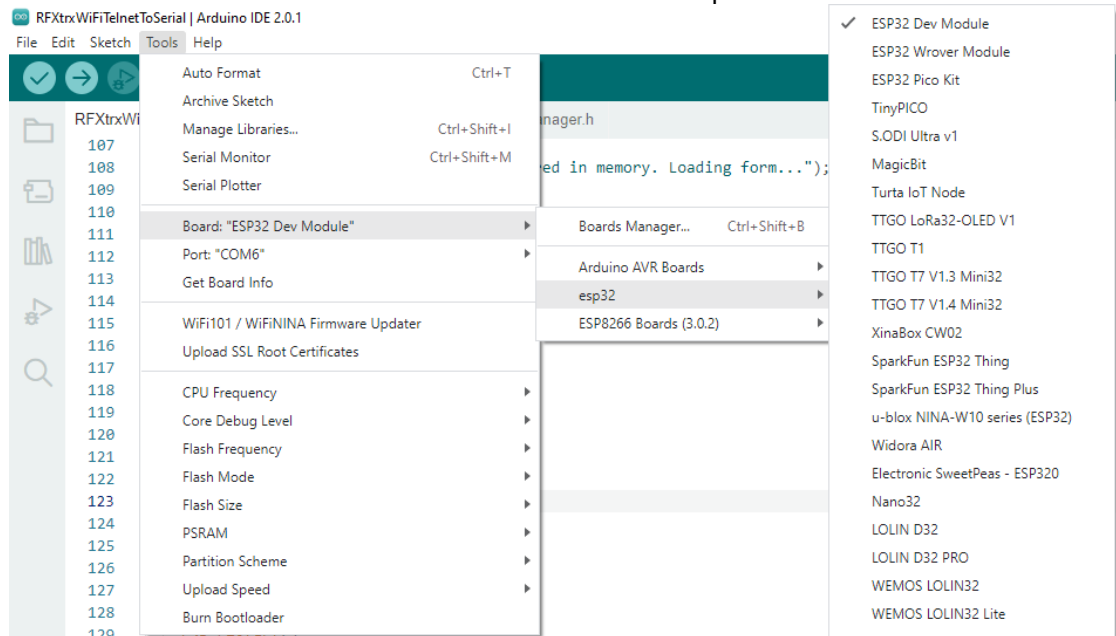

SSID:	<input type="text"/>
Key:	<input type="text"/>
Local IP:	<input type="text"/>
Subnet Mask:	<input type="text"/>
Gateway:	<input type="text"/>
<input type="button" value="Save"/>	

Click Save and the RFXtrxWifi will restart and connect your Wifi.

### 7.3. Flash the Wifi firmware in the RFXtrxWifi

- Download the Arduino IDE to flash the ESP32 in the RFXtrxWifi with new firmware.  
<https://www.arduino.cc/en/software>
- In Arduino IDE:  
Open File – Preferences and add at Additional boards manager URLs:  
[https://dl.espressif.com/dl/package\\_esp32\\_index.json](https://dl.espressif.com/dl/package_esp32_index.json)
- Open Tools – Board: “xxxxxx” -Boards Manager  
At BOARDS MANAGER enter ESP32 and INSTALL the latest version “esp32 by Espressif Systems”.
- Select “ESP32 Dev Module” at Tools – Board: “xxxx” – esp32

- Select the COM port of the RFXtrxWifi at Tools – Port
- To know the Sketchbook location open File – Preferences – Settings.  
Copy the RFXtrxWiFiTelnetToSerial directory to your Arduino sketch directory  
RFXtrxWiFiTelnetToSerial directory contains:
  - HTML.h
  - revisions.txt
  - RFXtrxWiFiTelnetToSerial.ino
  - WifiFunc.h
- Open RFXtrxWiFiTelnetToSerial.ino and click the Upload button. The firmware will be compiled and flashed in the RFXtrxWifi ESP32

#### **7.4. Use the USB port of the RFXtrxWifi for the RFX433/RFX868**

Copy the RFXtrxUSB directory to your Arduino sketch directory. The RFXtrxUSB directory contains only RFXtrxUSB.ino

Open RFXtrxUSB.ino and click the Upload button. The USB firmware will be compiled and flashed in the RFXtrxWifi

## 8.8. MDREMOTE V106, V107

This MDREMOTE has been tested.

<http://www.ultraleds.co.uk/mini-dimmer-with-rf-remote-control-12-or-24v-dc-12a-maximum.html>

The RFXtrx433 can only transmit MDREMOTE commands.

Procedure to find the ID of the MDREMOTE: In RFXmngr enable the X10 protocol and enable "Undec on". Press a button on the MDREMOTE remote.

The undecoded message contains the ID in the 2<sup>nd</sup> and 3<sup>rd</sup> byte, for example:

UNDECODED NEC:20AF6801D1

The 2 bytes after 20 is the MDREMOTE ID, in this example AF 68

## 8.9. MDREMOTE V108, EKAB-10KRF

This MDREMOTE has been tested.

- <http://www.ledstripkoning.nl/accessoires/dimmers-wit/draadloze-dimmer-10-knops-rf/>

Procedure to find the ID of the MDREMOTE: In RFXmngr enable the Lighting4 protocol and enable "Undec on". Press a button on the MDREMOTE remote.

The undecoded message contains the ID in the 2<sup>nd</sup> and 3<sup>rd</sup> byte, for example:

UNDECODED ARC:201A0703FCFC

The 2 bytes after 20 is the MDREMOTE ID, in this example 1A 07

## 8.10. Aoke relay

The Aoke 12V DC - 315MHz or 433.92MHz 1 channel relay is available at [www.aliexpress.com](http://www.aliexpress.com) store No.110758. Indicate clearly the required frequency when ordering!

The 1 channel learning relays can be used, see the picture below.

For example, for 1 relay:

[http://www.aliexpress.com/store/product/DC12V-1CH-wireless-switch-remote-control-system-remote-control-switch-for-guard-door-window-curtain/110758\\_936534863.html](http://www.aliexpress.com/store/product/DC12V-1CH-wireless-switch-remote-control-system-remote-control-switch-for-guard-door-window-curtain/110758_936534863.html)

or for 6 relays:

[http://www.aliexpress.com/store/product/ak-DC12V-1CH-RF-rocker-switch-livolo-switch-system-in-china-j-12a-108d-smart-house/110758\\_1007306574.html](http://www.aliexpress.com/store/product/ak-DC12V-1CH-RF-rocker-switch-livolo-switch-system-in-china-j-12a-108d-smart-house/110758_1007306574.html)

The jumper next to the learning button defines to operating mode:  
Open = momentary  
1-2 = toggle mode  
2-3 = on/off mode (to be used with the RFXtrx)

## 8.11. SEAV TXS4

The ID can be found using RFXmngnr and enable only ByronSX and undec on.

Or calculate the ID:

A SW1 switch on = 1

```
|-----SW1-----|
 1 2 3   4 5 6 7   8 9 10
0 x x x | x x x x | x x x 0 | 0 1 0 1
```

For example SW1 = on off on off on off on off on off

The ID will become:

```
|-----SW1-----|
 1 2 3   4 5 6 7   8 9 10
0 1 0 1 | 0 1 0 1 | 0 1 0 0 | 0 1 0 1 this is hex: 5 5 4 5
```

## 8.12. How to find the dx.com RGB LED strip driver ID

Valid for the TRC02 remote with 2 batteries.

Flash the RFXtrx433 with Type2 firmware to be able to receive the remote ID in RFXmngnr.  
In RFXmngnr enable only the LightwaveRF (AD) protocol.

```
-----
Packettype    = Lighting5
subtype       = RGB TRC02
Sequence nbr  = 5
ID            = FCC48B
Command       = On
Signal level  = 8
The ID is: FC C4 8B
```

If necessary flash the RFXtrx433 back to Type1 or ext if Type2 does not support devices you need. (See chapter 2.2)

## 8.13. How to find the dx.com RGB LED strip driver ID (rev. 2)

Valid for the TRC02 remote with 3 batteries and ebay.com 191481664563.

In RFXmngnr enable only the Lighting4 protocol.

```
-----
Packettype    = Lighting4
subtype       = PT2262
Sequence nbr  = 29
Code          = 161C84
The ID is: 16 1C
```

## 8.14. How to find the Eurodomest ID

You can assign a random ID to the Eurodomest. If you want to use the same ID as the remote you can find the ID of the remote using RFXmngnr.

Start RFXmngnr and enable only the Lighting4 protocol.

Press a button on the remote and you will receive a message like:

```
-----
Packettype    = Lighting4
subtype       = PT2262
Sequence nbr  = 12
Code          = 6DFE0F
The ID is: 6 DF E0
```

Note: Eurodomest can also be controlled using ARC.

### 8.15. How to find the Screenline ID

You can assign a random ID to the Screenline. If you want to use the same ID as the remote you can find the ID of the remote using RFXmngnr.

Start RFXmngnr and enable only the Lighting4 protocol and undec on.

Press a button on the remote and you will receive a message like:

```
-----  
Packettype = UNDECODED RF Message  
UNDECODED ARC:40000F7BD1D2AF04B7
```

The ID starts at the 7<sup>th</sup> character, in this example the ID = 7B D1

### 8.16. How to find the Avantek remote ID

You can find the ID of the remote using RFXmngnr.

Start RFXmngnr and enable only the Lighting4 protocol.

Press a button on the remote and you will receive a message like:

```
Packettype      = Lighting4  
subtype         = PT2262  
Sequence nbr    = 3  
Code            = 122336 decimal:1188662  
S1- S24         = 0001 0010 0010 0011 0011 0110  
Pulse           = 280 usec  
Signal level    = 7 -64dBm
```

The ID to be used is 1 22 33

### 8.17. How to find the Siemens SF01 ID

Start RFXmngnr and enable only undec on.

Press a button on the remote and you will receive a message like:

```
-----  
11-04-2023 11:08:56:552=  
507F000001014802F8013002EC012E02EF012A02ED012D02F1012902EF012A01A9027002ED012D01A8027401A1027801A30

Packettype      = RAW Packet  
Packet Length   = 80  
subtype         = RAW packet  
Sequence nbr    = 0  
Repeat          = 1  
Nbr of pulses   = 19

```

A short-long pulse time is a "1" and long-short is a "0", thus:

```
328 760 304 748 302 751 298 749 301 753 297 751 298 425 624 749

301 424 628 417 632 419 630 749 300 754 296 751 299 417 631 746  
1      0      0      0      0      0      1      1      1      1      1      1      1      1      1      1  
304 755 299 423 625 0  
1      1      0
```

The ID is in the first 16 bits. 1111 1110 1000 1110

Convert binary to hex and you find the ID: FE 8E

## 9. Blyss commands

Some Blyss devices, like the Blyss motors, require a special command sequence number. To simplify it; 0,1,2,3,4,0,1,...

This sequence number is normally created by the Blyss remote but now also by the RFXtrx433.

If you use a Blyss remote and the application (Domoticz, DomotiGa, Homeseer...) does not sync with the received Blyss command you will see that you need to send multiple commands with the RFXtrx433 before the Blyss device will respond.

For example,

The Blyss remote transmits with the sequence numbers 0,1,2

If the RFXtrx433 transmits now with sequence number 0 it will not be seen by the Blyss device as a valid command and at the time the RFXtrx433 transmits the commands 1,2,3 the command will be detected as valid when it receives the command with sequence number 3.

The same is true for the remote. If you transmit commands with the RFXtrx433 and after that with a Blyss remote you need to transmit several commands with the remote before the Blyss device responds.

I guess the same behaviour will show if you use multiple Blyss remotes.

## 10. Somfy RTS

Somfy RTS\* devices can only be controlled by the RFXtrx433E, RFXtrx433XL, RFX433. (Not by the RFXtrx433)

The RFXtrx433E, RFXtrx433XL, RFX433 version is an RFXtrx433 with additional hardware to enable the RFY protocol used to control Somfy RTS.

The 433.42MHz transmitter in the RFXtrx433E/RFXtrx433XL/RFX433 is used for a reliable control of the Somfy RTS devices over a large distance and through walls.

The RFXtrx433E, RFXtrx433XL, RFX433 433.92MHz transmitter is also used to control all other devices.

To pair the Somfy RTS device:

- Select a unique ID and unitcode for the RFXCOM RFY device.
- Disconnect power from all Somfy RTS devices except the device to pair. (not necessary if you select the correct device on the Somfy remote)
- Press the Program button > 2 seconds on the original Somfy remote until the Somfy device responds.
- Transmit a Program command with the RFXtrx433E, RFXtrx433XL, RFX433 The Somfy RTS device should respond indicating the pair command was successful.

The RFXCOM RFY remote is registered in the RFXtrx433E, RFXtrx433XL, RFX433 by sending a Program command.

Up to 40 RFXCOM RFY remotes can be registered in the RFXtrx433E, RFXtrx433XL, RFX433. Remotes can be erased from the RFXtrx433E, RFXtrx433XL, RFX433 using the RFXmngn program.

The Somfy RTS device can be controlled by any application if the same ID and Unit Code are used.

For example, if the RTS device is paired using RFXmngn with ID=1 02 03 and Unit Code 1, the RTS device can be controlled with Homeseer using the same ID and unit code.

### **Usage:**

To control Somfy Centralis modules use the RFY2 = > 2 seconds commands.

Somfy Tilt motors can be configured in 2 modes, US or European.

To toggle between modes, press the Reset/ Prog button 2 s. Repeat until the LED, according to the desired configuration, lights up. Store by pressing 2 s.

To control Venetian Blinds in US mode:

- up/down (transmit < 0.5 seconds): open or close
- up/down (transmit > 2seconds): change angle

To control Venetian Blinds in Europe mode:

- up/down (transmit < 0.5 seconds): change angle
- up/down (transmit > 2seconds): open or close

Somfy RTS motors have a limited number of memory locations for the remotes. Some have a max of 10 remotes. If you try to pair the 11th remote (can be a RFXtrx433E, RFXtrx433XL, RFX433 ID-unit) the motor reacts as if the pairing was successful but there is no response on an up/down command.

To solve this, reset the motor to remove all remotes.

## 10.1. How to move RFX devices to another RFXtrx433E, RFXtrx433XL or RFX433

Important:

1. If an RFX device is moved to another RFXtrx do not use the old RFXtrx to control the RFX devices, because the rolling code will become out of sync with the Somfy device.
2. Use the latest RFXmngnr and for the RFXtrx433E the latest Pro1 or Pro2 firmware and for the RFXtrx433XL the latest ProXL1 firmware and for the RFX433 the latest RFX433 FW

Step 1: List all RFX devices in the “old” RFXtrx.

The screenshot shows the RFXmngnr software interface. The 'Type' is set to 'RFY'. The 'ID' is 0, 'Unit Code' is 1, and the 'Command' is 'List remotes'. The 'rfu1', 'rfu2', and 'rfu3' fields are all set to 00. The 'Transmit' button is highlighted. Below the input fields, there is a yellow box containing the following text:

```
=====
02-Dec-18 03:13:53:971= RFY command

Packettype   = RFY
subtype      = RFY

Command      = List remotes

Packettype   = Interface Message
subtype      = RFY remote:0 ID:00 00 01 unitnbr:1 rfu1:A4 rfu2:0 rfu3:14
```

Step 2: Connect the “new” RFXtrx433E, RFXtrx433XL or RFX433.

Select the ID, Unit Code, rfu1, rfu2 and rfu3 values.

Transmit a Program command. The values are now programmed in the “new” RFXtrx and the Somfy device can be controlled with this RFXtrx.

Transmit an Up and Down command to be sure the motor is no longer in program mode!

The screenshot shows the RFXmngnr software interface. The 'Type' is set to 'RFY'. The 'ID' is 0, 'Unit Code' is 1, and the 'Command' is 'Program'. The 'rfu1' field is set to A4, 'rfu2' is set to 00, and 'rfu3' is set to 14. The 'Transmit' button is highlighted. Below the input fields, there is a yellow box containing the following text:

## 11. BlindsT6

To add a RFXtrx433/E/XL, RFX433 BlindsT6 device to the blinds motor:

1. press the "program" button twice on the original remote ==> 2 beeps
2. transmit the "confirm" command with the RFXtrx ==> 5 beeps

### 11.1. Dooya DT52E, DT82TV, DT82TN

- Select a random ID different from all zeroes and a unit code 1 to 15
- Press the program button on the motor until the LED lights up
- Transmit a Confirm command
- The LED on the motor starts blinking
- Transmit again a Confirm command
- The LED on the motor blinks 5 times
- The motor can be controlled now by the RFXtrx433/E/XL, RFX433

## 12. ID switches Casafan and Lucci Air fans

Select the ID for switch settings:

### 13. Transmit Funkbus (Insta, Gira, Jung, Berker)

With Pro2 or ProXL1 firmware you can transmit Funkbus commands using ID : 3F CC.  
If the Home Automation application has Funkbus control not implemented, you can use an ANSLUT device instead.

The 1st digit of the ID indicates the Group.

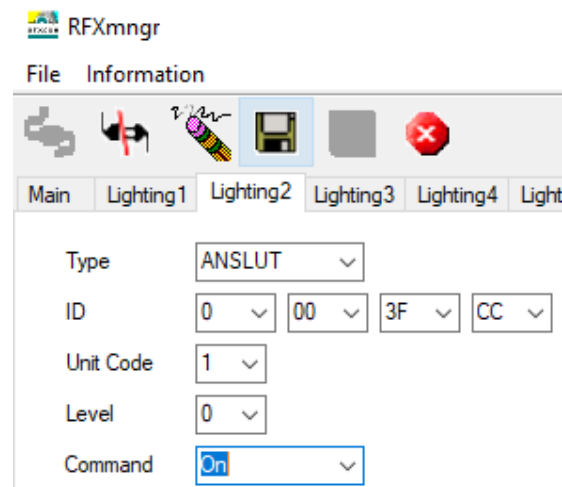

0 = A,  
1 = B,  
2 = C,  
3 = Scenes

The last 2 bytes are the remote ID: 3F CC.

For de groups A, B en C: Unit code 1-8 = channel 1-8

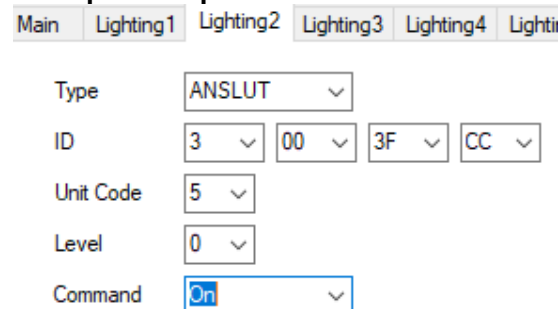

For group Scenes (3) : Unit code 1-5 = scene 1-5.

#### Example Group A - Channel 1 - On

The screenshot shows the RFXmngnr software interface. At the top, there is a menu bar with 'File' and 'Information'. Below the menu bar is a toolbar with icons for various functions. The main window has a tabbed interface with tabs labeled 'Main', 'Lighting1', 'Lighting2', 'Lighting3', 'Lighting4', and 'Lighting5'. The 'Lighting1' tab is selected. In the 'Lighting1' tab, the 'Type' dropdown is set to 'ANSLUT'. The 'ID' field is composed of four dropdowns: the first is '0', the second is '00', the third is '3F', and the fourth is 'CC'. The 'Unit Code' dropdown is set to '1'. The 'Level' dropdown is set to '0'. The 'Command' dropdown is set to 'On'.

#### Example Group Scenes – Scene 5 - On

The screenshot shows the RFXmngnr software interface. At the top, there is a menu bar with 'File' and 'Information'. Below the menu bar is a toolbar with icons for various functions. The main window has a tabbed interface with tabs labeled 'Main', 'Lighting1', 'Lighting2', 'Lighting3', 'Lighting4', and 'Lighting5'. The 'Lighting2' tab is selected. In the 'Lighting2' tab, the 'Type' dropdown is set to 'ANSLUT'. The 'ID' field is composed of four dropdowns: the first is '3', the second is '00', the third is '3F', and the fourth is 'CC'. The 'Unit Code' dropdown is set to '5'. The 'Level' dropdown is set to '0'. The 'Command' dropdown is set to 'On'.

## 14. Transmit undecoded ARC commands.

Plug-in modules or other equipment with a PT2262 can be controlled using Lighting4. There are a lot of brands using the PT2262 and some of them use the same timing (350) as used by the ARC devices but a different protocol definition.

Messages will be received as undecoded ARC messages if the protocol definition does not match the definition of the ARC protocol. Remote commands are received as ARC commands with a wrong house and device code and/or command code or as undecoded ARC messages if “undec on” is enabled. Decoding of these remotes is therefore not possible because they overlap the ARC protocol partly.

But transmitting these commands is possible using the Lighting4 command.

So if we receive this command UNDECODED ARC:18014403:  
(18 is not used)

hex to binary table

```
0=0 0 0 0
1=0 0 0 1
2=0 0 1 0
3=0 0 1 1
4=0 1 0 0
5=0 1 0 1
6=0 1 1 0
7=0 1 1 1
8=1 0 0 0
9=1 0 0 1
A=1 0 1 0
B=1 0 1 1
C=1 1 0 0
D=1 1 0 1
E=1 1 1 0
F=1 1 1 1
```

0 1 4 4 0 3 = selection box 0000 0001 0100 0100 0000 0011

Not selected = 0, box selected = 1

And the Lighting4 command contains the same “undec code” 01 44 03:

Lighting4 command:09 13 00 04 **01 44 03** 01 5E 00

pulse timing is 350 = hex 015E

Another example:

For this command UNDECODED ARC:18014430 set on the Lighting4 tab in RFXmngnr selection box 1 to 24 to 0 1 4 4 3 0 = 0000 0001 0100 0100 0011 0000

## 15. MCZ pellet stove.

### **RFXtrx433/RFXtrx433E:**

In the Type2 firmware zip file which is available on the downloads page you will find a special firmware RFXtrxMCZ.hex that enables you to know the ID of the your MCZ remote.

Flash the RFXtrxMCZ.hex firmware in your RFXtrx433/E/XL and start RFXmngn.

### **RFXtrx433XL, RFX433:**

In RFXmngn select Receiver Freq 434.50 and enable MCZ

Transmit a command with the MCZ remote and you will receive the information.

The ID in this example is 81 3F 22

```
Packettype = Thermostat4
subtype    = MCZ pellet stove 2 fans model
Sequence nbr = 0
ID         = 0x813F22 decimal:8470306
Beep       = Yes
Fan1 speed = 1
Fan2 speed = 7
Flame power = 1
Command    = Off
Signal level = 6 -72dBm
```

Flash now Type2 or Ext firmware in your RFXtrx433/RFXtrx433E and you can control your MCZ stove using the received ID.

Important: remove the batteries from the original remote before you start using the RFXtrx433/E/XL, RFX433 to control the MCZ stove!

## 16.5. Sonoff

All Sonoff 433MHz RF receiver devices can be controlled by the RFXtrx433/E/XL using Lighting4 with a pulse timing of 370usec.

The 4 button Sonoff Lighting4 remote code:

The last digit indicates the button:

A	0001	hex 1
B	0010	hex 2
C	0100	hex 4
D	1000	hex 8

The first 5 digits are the ID. Here an example of ID=D216B button=A

```
Packettype    = Lighting4
subtype       = PT2262
Sequence nbr  = 1
Code          = D216B1 decimal:13768369
S1- S24      = 1101 0010 0001 0110 1011 0001
Pulse        = 370 usec
Signal level  = 8 -56dBm
```

The Lighting4 commands can be used for example to control the 4 relays in a Sonoff 4CH Pro [https://www.banggood.com/SONOFF-4CH-Pro-10A-2200W-2\\_4Ghz-433MHz-RF-InchingSelf-LockingInterlock-Smart-Home-p-1153324.html](https://www.banggood.com/SONOFF-4CH-Pro-10A-2200W-2_4Ghz-433MHz-RF-InchingSelf-LockingInterlock-Smart-Home-p-1153324.html)

### 16.6. PT2262 and EV1527 oscillator resistors accepted

For the PT2262 use a 3M3 oscillator resistor  
For the EV1527 a 220K, 270K or 390K oscillator resistor can be used.

## 17. Receive and Transmit RAW data

The Pro firmware can receive and transmit RAW data. This can be used to replay received data received from a remote. Note that this can only be used for a protocol with fixed code and rolling code cannot be used.

It is unknown if and how this is implemented in Home Automation applications!

Here an example of a packet received from an ARC remote in RFXmngnr:

```
RAW Packet:
687F000001010804720132046701340467041401BB01300474013104680131046E0131046D0131047001330470012D046B0

046F012E0000
Packettype      = RAW Packet
Packet Length   = 104
subtype         = RAW packet
Sequence nbr    = 0
Repeat          = 1
Nbr of pulses   = 25
264 1138 306 1127 308 1127 1044 443 304 1140 305 1128 305 1134 305 1133 305 1136
307 1136 301 1131 307 1132 304 1138 306 1134 305 1129 306 1130 307 1133 312 1132
304 1130 1044 441 305 1137 1047 439 307 1130 307 1135 302 0
```

The last value of zero indicates a gap timeout and the real gap is greater than 8000. To replay this packet replace the last zero with a value greater than 8000.

To replay this in RFXmngnr, create a text file with the content below and send it on the RAW transmit tab.

The first value is 0 which indicates it is a single packet

The next value (7 in this example) is the repeat count.

Do not set the repeat count too high to lower the risk to disturb other RF transmissions.

```

```

the next values .....

```
307
1135
302

```

If you receive multiple RAW packet with more than 62 pulses, try to find the gap. This is normally a higher value and smaller than 8000. Here an example with a gap value of 6600 and the next 6596.

4. Cut also at the same position a few plastics from the bottom part.
5. Close the enclosure. First turn the screw counter clockwise until you hear/feel a soft click, now turn the screw clockwise and fix the screw (not too tight)

## 19. RFXtrx433XL - Teleinfo connection

The RFXtrx433XL can be connected to the French smart meter and needs a Teleinfo interface. At the moment we only supply the Teleinfo interface option only for the RFXtrx version 5.1 (this is on the PCB) which is delivered starting batch 4918 and the later batches xx19 (xx=01 to 52). The batch number is on the label on the backside of the enclosure.

This option cannot be added in the RFXtrx433XL batch 3618 or 4018!!

The connection can be tested in RFXmngr.

Select the correct parameters and click "Transmit Async Port command".

Important: the Teleinfo connection must be present!

The setting is 1200, 7, Even, 1 and Normal polarity for the "historique" meter

The setting is 9600, 7, Even, 1 and Normal polarity for the new Linky meter

### 19.1. Teleinfo option PCB for RFXtrx433XL batch 4918 and later

1. Open the enclosure by removing the 4 screws.
2. Press the 5 pins of the P1 PCB into the RFXtrx433XL PCB RFXtrx V5.1.  
Use a wrench to push the connector into the PCB until the black part of the Press-Fit connector is on the RFXtrx PCB.
3. Cut a few plastics from the upper side (only the raised edge) of the enclosure for the cable, using a Stanley knife.
4. Cut also at the same position a few plastics from the raised edge of the bottom part.
5. Close the enclosure. First turn the screw counterclockwise until you hear/feel a soft click, now turn the screw clockwise and fix the screw (not too tight)

## 20. RFXtrx433XL - Connection points for a serial interface

This connection can be used for a serial connection with the RFXtrx433XL instead of the USB interface.

The serial interface is using logic level of 5V maximum.

**WARNING:** Do NOT connect a RS232 interface that operates at +/-12Volts!!

**Important:** warranty is lost if this modification is used.

- Cut the PCB trace between the connection point R and the FT230X pin 15.
- Connect the serial interface to GND, T and R. Be sure to use a 3V3 or 5V logic level!
- The +5V can be used to power and external interface if required. In this case the RFXtrx433E must be powered by a 5V power supply connected to the USB interface. The +5V can also be an input for powering the RFXtrx433XL. Do not exceed +5V or the RFXtrx433XL will be destroyed.
- The serial interface is using 38400,N,8,1
- Be sure not to use a serial device that produces RF noise at 433MHz. A bad example of such a device is the USR-TCP232 LAN device.

## 21. Recover from interrupted or wrong flash.

The RFXtrx can become in a loop after an interrupted flash or if you have flashed a wrong firmware. In this case the red LED stays on and no communication is possible.

1. Disconnect the USB,
2. Make a temporary connection (no soldering required) on the backside of the PCB as indicated below by the yellow connection,
3. Connect the USB,
4. Disconnect the temporary connection,
5. Start RFXflash and update the firmware.

## 22. FAQ

### ***22.1. Receive has stopped suddenly but transmit works.***

Most probably a sensor is transmitting constantly. This could be for example an X10 MS13 motion sensor or weather sensor with almost empty battery. Or an outside weather sensor filled with water. Or a remote with a button pressed.

Test the RFXtrx with a remote or sensor on another location (> 1km away) using RFXmng on a Windows system or laptop.

### ***22.2. Can I increase the receive/transmit range of the RFXtrx?***

First check chapter 2.5 for the best place for the RFXtrx antenna.

The switch board is not the best place for the RFXtrx because of all metal objects that will absorb or reflect the RF signals.

It is also advised to place the RFXtrx far away from PC's, routers, Raspberry PI ... because of the RF noise those products produce, and this will reduce the receive range very much.

You can connect another 50ohm 70cm/433MHz antenna with more gain.

For example, <http://www.ebay.com/itm/290979680030>

Install this antenna on a metal plate of at least 30 cm for optimum result.

### ***22.3. The RFXtrx USB connection disconnects sometimes.***

This happens mostly on Raspberry PI with a low-quality power supply. Solution is to use a powered USB hub with a good quality power supply.

It can also happen if the USB cable is running along a power cable or a power device is switched on that produces a high-power spike like a fluorescent tube. Solution is to separate the USB cable from all other cables and/or use a powered USB hub with a good quality power supply.

### ***22.4. I have a 433.92MHz sensor/remote but this device is not received.***

Besides the frequency the used protocol and modulation type is also important.

See chapter 2 for the list of supported devices.

### ***22.5. The wall plug is switched by the remote, the remote is received but the RFXtrx does not switch the module.***

The remote transmits several protocols. The protocol used by the wall plug is not received by the RFXtrx but some other protocols are received.

Solution:

For the HomeEasy EU- HE8xx series: reset the module to remove all paired remotes and pair the module with the RFXtrx433E and one of remote codes that is received.

For IT modules FA500/PROmax: Pair the RFXtrx433E with the module using an IT device and select a random ID. The received remote code can be used to know if the module is switched by the remote.
